

CARLSSON C-TRONIC® DIESEL POWER CD32 REVO

3 year warranty

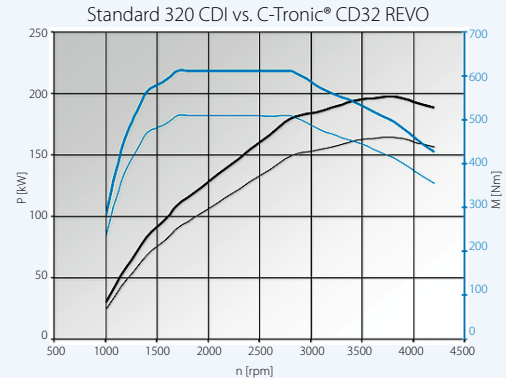

That guarantees a safe and intelligent as well as a reliable use of the enormous power reserves of the engine. The C-Tronic® protects the driving mechanisms as well as the complete power train; especially during switching operations performance is - as in the serial condition - gently and subtly reduced. This way, the powertrain from clutch to axle driving shaft is guarded against an overcharge.

The new Carlsson C-Tronic® mobilises reserves by REVOLUTIONARY engineering without - and this is important - ever interfering with the embedded safety mechanisms.

C-Tronic® Diesel POWER CD32 REVO consists of C-Tronic® additional control unit, Carlsson adapter plugs and wiring harness.

The C-Tronic® engine electronics constantly responding to all engine and operating data. Well in advance before it might become critical, the additional performance is controlled.

Available for all up-to-date 280/320 CDI engines. C-Klasse, CLK-Klasse, E-Klasse, CLS-Klasse, S-Klasse und ML-Klasse MSRP in € excl. VAT 1.499,- Adapter Kit on request
